

# ENVIRONMENTAL POLICY

## ENVIRONMENTAL RESPONSIBILITY CAN'T BE OUTSOURCED

As a player in the construction industry, we not only have the possibility, but also the responsibility to build a more sustainable future. Taking care of the environment plays an important role in our operations.

We are committed to fulfilling all legal environmental requirements that apply to our operations. We also always take our customers' environmental requirements into consideration when developing and executing projects.

We recognise the environmental impacts of our operations and are committed to reducing their negative effects. During construction, we strive to find sustainable, energy-efficient solutions and minimise the environmental impacts of our operations throughout the entire lifecycle of the building.

We offer targeted environmental training to all our staff. This way, we ensure that our staff understands their role as responsible actors as well as the environmental requirements set out by legislation and our customers. Our aim is that everyone at Jatke can actively participate in developing sustainable construction practices and minimising their negative environmental impacts.

## OUR GOAL IS TO BUILD RESOURCE-EFFICIENTLY

We pay special attention to material efficiency on our construction sites. At Jatke, this means reducing the amount of waste produced by minimising the loss of building materials as well as sorting and recycling the waste generated.

We encourage our business partners to participate in reducing environmental impacts and continuously develop more environmentally considerate practices.

To ensure systematic operations and continuous improvement, we are implementing and shall maintain an environmental management system in accordance with ISO 14001. We set environmental goals annually and monitor their development throughout our organisation.

This environmental policy applies to each of Jatke group's companies and their staff.
